

The Treatment of Osteoarthritis & Rheumatoid Arthritis

Because of the differences between these two conditions, treatment with our Viofor JPS system varies.

With osteoarthritis, the treatment is hard and fast to reverse the natural deterioration of tissues and to increase the viscosity of the joint fluids.

With rheumatoid arthritis, the treatment is more gentle, aiming for progressive recovery between arthritic attacks.

Directly after treatment joints might feel strange at first. This is because of changes in lubrication. Because of the way the treatment works, healing continues for up to eight hours after application, so an improvement may be felt in the symptoms some time later.

The treatment is safe because no foreign bodies are being introduced and the level of magnetic induction is low.

It is also important to note that the smaller the joint (e.g. hand/finger joints as opposed to hip joints), then the faster the response times after treatment.

What we can offer

We believe that the JPS System is the only clinically tried and tested therapy available on the market today that does not produce negative side effects when treating arthritis, making it the most effective way of creating a better quality of life.

We are not claiming to cure Arthritis and cannot eliminate the naturally degenerative process of the body. However, we can vastly improve mobility, reduce pain and swelling of individual joints in a natural, non-invasive, side effect free way.

The Viofor JPS system used in the Sanctuary is a fully certified system for rehabilitation and therapy.

Results of Treatment in clinical trials

Osteoarthritis

97% benefited from treatment (1)

This is one of the most rewarding areas for the application of electromagnetic stimulation. In a recent clinical study of 259 patients, 97% benefited from the treatment, with 23% registering disappearance of symptoms, 49% showing substantial improvement and 25% improvement. 2% showed no change and 1% showed further deterioration.

Rheumatoid Arthritis

95% benefited from treatment (1)

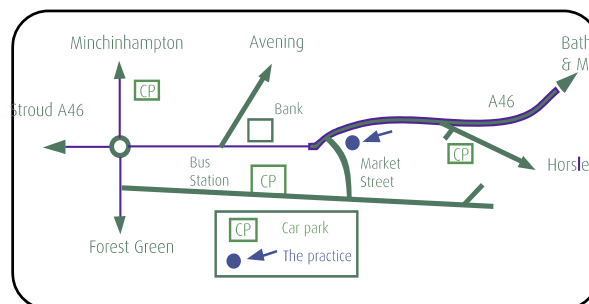

In the latest study of 55 patients, 2% showed a disappearance of symptoms, 40% made substantial improvement, 53% showed improvement and 5% stayed the same. Nobody deteriorated.

Testimonials

Mrs CS - St Leonards on Sea

I have been suffering from Arthritis in my legs, hips and spine for around twenty years and have had other therapies in an attempt to keep it at bay. These helped a little but did not give me any lasting relief from the pain that I was experiencing. My daughter suggested that I try EMS Therapy and I am happy to report that after just three treatments on the equipment my pain and discomfort have reduced by 80% and my mobility has much improved. After the first treatment I experienced an increase in pain, which lasted for two days, however the treatment manual mentioned that this might happen and I was prepared for it. I will continue to use this wonderful equipment and would recommend it to anyone who suffers from arthritis.

Ms I - Gloucestershire

I had osteoarthritic pain to my left knee which made mobility and day to day living uncomfortable. I also have problems with anxiety, for which I am on daily medication.

Through my course of treatment I have noticed that the pain has reduced and I have to take less analgesia just to be able to undertake my job. I have greater range of movement and more freedom to love life. I am also beginning to enjoy walking again, and with a dog that is a big part of my and her, life.

I have also felt the ability to reduce the medication for my anxiety that I have been taking for years, and I am hoping to be completely off them soon.

Mrs J P - Lancashire

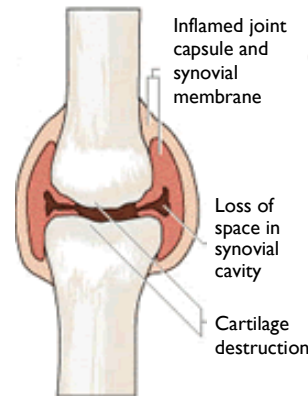

Three years ago I was diagnosed with Rheumatoid Arthritis and in June 2004, after trying pain and inflammation inhibitors, supplements and other types of therapy, I started to use the EMS Therapy bed. The arthritis was badly affecting my joints but after only a few sessions on the bed the pain and stiffness in all areas decreased.

For the last two months I feel wonderful and have been almost pain free. I have nothing but gratitude and thanks that such marvellously effective equipment exists. I recommend this therapy to anyone suffering with Rheumatoid Arthritis without hesitation.

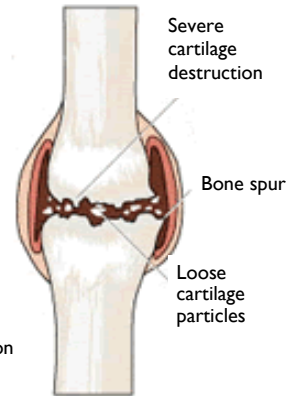

Osteoarthritis

Osteoarthritis is caused by the breakdown and eventual loss of the cartilage that serves as a "cushion" between the bones of the joint. The onset of OA is a gradual process and often deteriorates with age. This deterioration may be more marked in those people who are significantly overweight. Electromagnetic stimulation therapy has been shown to offer significant symptomatic relief from the pain associated with OA.

OSTEOARTHRITIS

RHEUMATOID ARTHRITIS

Rheumatoid Arthritis

Rheumatoid arthritis unlike OA is not primarily associated with ageing and the effects of 'wear and tear', but can affect people of any age. In RA the body's own immune system mistakenly attacks the joints, their surrounding tissue and even other organs of the body, resulting in hot, swollen and painful joints.

Although RA can affect people of all ages it is more prevalent in women than men. Patients tend to experience an initial attack which can be of varying severity, they may then have several years before subsequent and more severe attacks. The damage caused by RA cannot be reversed although with EMS therapy, some of the painful symptoms can be significantly reduced.

Want to find out more?

The benefits to Arthritis patients after treatment with EMS Therapy, using the Viofor JPS system, are outlined in our second leaflet "An In-Depth Look at the Treatment of Arthritis".

If you would like a copy or wish to talk about anything in this leaflet then please do not hesitate to contact us! Our Contact Details are on the back cover.

Our carefully designed "loop" system for treating Arthritis in the hands.
