

Who can benefit?

Due to unexpected nature of life, anyone's Assemblage Point (AP) can become offset at any one time.

Theragem treatments can be used to provide regular AP assessment and correction as part of maintaining a healthy lifestyle.

Sports people or teams, business people or anyone who wants to give themselves the best chance of success in any area of life can benefit from Theragem treatment and AP correction.

It can be an important part of a professional of personal development assessing a range of mental and physical abilities including assertiveness, social ability, hearing, posture, etc.

This therapy is particularly suitable for children with asthma and eczema and is also beneficial for adults with:

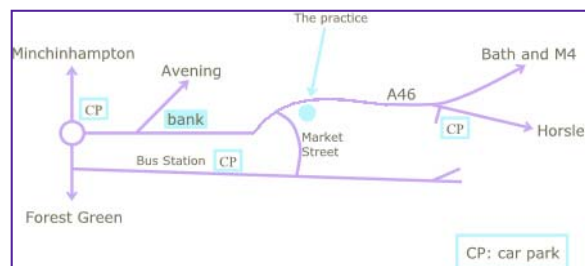

- Alzheimer's Disease
- Anxiety and depression
- Arthritis
- Asthma and other lung and breathing disorders
- Candida
- Chronic fatigue syndromes including ME
- Fibromyalgia
- Influenza
- Injuries
- IBS
- Joint pain
- ME
- Menstrual/ Ovarian problems
- Pain, including back pain
- PMT
- Prolapsed disc
- Repetitive Strain Injury
- Sciatica
- Skin complaints, including eczema, psoriasis, burns, vitiligo
- Stroke recovery
- Ulcers

The Science Behind Gem Light Therapy

Everything in the universe is made up of energy, as proven by Einstein. Every physical item has a resonance (or low level of vibration) and its own electro-magnetic frequency. Such as, the Earth rotates on the north and South Pole and the human body the Assemblage Point(AP). Waves of electrical energy or frequency are emitted, such as infra-red, gamma rays and ultra violet rays. The visible ones are seen as light. Should a person's energy flow be restricted or altered in anyway, it will cut off the balance and will affect their health.

Crystals and precious gemstones, serve as nature's natural storing agent for electro-magnetic energy. These have long been recognised by medics, shamans and healers in ancient times. Their powerful rays of colour determine the frequency of the energy that they emit and this can penetrate beneath the skin affecting the cells of the body. It can positively affect the electromagnetic state in the human energy system.

By combining natural healing frequencies with colour light and gem stones the vibrational rates of the body's cells, organs and glands can be influenced at a level that is 100 times more powerful, proving effective and rapid results.

By combining the precision of electronic engineering and medical vision of ancient times, Theragem provides a modern day solution to many of today's pain and diseases.

The stimulation of crystals with frequencies is called Dielectric Resonance or Crystal Light Therapy.

How does it work?

Crystal Light Therapy uses the dielectric resonating properties of the crystal, along with natural healing frequencies and colour to influence the vibrational rates and energy of live cells of tissue, bone, organs and glands. Used for a wide range of health problems, it is a gentle non-invasive technique that can kick start the body's natural healing.

Theragem uses a combination of light, colour, wave frequency and crystalline energy not only to move the Assemblage Point but also to relax the mind, taking away stress and anxiety and treat a range of other conditions.

The Assemblage Point

The centre of the human energy system

Infections, allergies and psychological and physical illnesses may cause an imbalance of a patient's organs and glands. At the same time the Assemblage Point (AP) is often found to be out of position in the body. The Assemblage Point is the vortex of the human energy system. The AP may also be off balance due to shock, bereavement, trauma, divorce, accident, childbirth, operations, to name a few.

Often, those with health problems resulting from this kind of imbalance have found that neither therapies nor medicines have resolved their problem. Unfortunately, accepted orthodox medical diagnostic and management procedures do not take the patient's Assemblage Point location into consideration. Crystal Light Therapy is able to correct problems by adjusting the biological activity of organs and energy imbalances and re-aligning the Assemblage Point.

What happens during a treatment?

The modern easy way to positively relocate an offset Assemblage Point is to use a gentle treatment with the Theragem.

A succession of relaxing treatments, where you lie or sit on a couch, will offer you the benefits of inner peace and contentment, better ability to cope with life, balanced energy in the glands and organs and better health as a result.

The gem stones are encased in a chamber which is inside low voltage lamps. Low voltage electronic pulses stimulate their resonance and this is then introduced by lamps to the part of the body that needs therapy.

A Theragem Session usually lasts for 30-60 mins; in general 2 sessions are used per week (each therapy can include up to 3 therapies). The lamps are directed at the part of the body that needs the therapy while you sit or recline. It is a relaxing and pleasing experience.

Those with acute conditions may feel the benefit during a session, with improved symptoms in 2 or 3 sessions.

This may take longer for chronic conditions. Most people experience improvement within 5 or 6 treatments.

“Going back to ancient Mayan, Hebrew, Vedic and Native American traditions the Assemblage Point ... was a key part of diagnosis in the treatment of pain.”
